How to Make an Origami Flower

coming together in solidarity with Trick and Mar
To begin, you will need a square piece of paper.
You can make a square out of a regular piece of printing paper by carefully folding one corner to meet the opposite edge, making sure that the top edge is perfectly aligned with the side edge.
Then, cut the bottom edge of the paper. When you unfold it, it will be a square.
When you unfold it, it will be a square. First, fold paper in half diagonally. If you started with a rectangular piece of paper, you’ve already done this.
Unfold the paper, then fold it in half diagonally in the other direction.
Unfold the paper again. Next, you will fold the corners of the paper to the centre, making sure that the creases and the edges align.
You should end up with a smaller square. Now, you will repeat the previous step, folding all of the corners to the centre.
Flip your new square over so that the smooth surface is facing up. Then repeat the previous step one more time, folding the corners to the centre.
The next step is shaping the petals. First, fold one of the corners slightly inward, then carefully lift the bottom flap and turn it inside out.
This is probably the most tricky part, and you just need to be careful not to tear the paper. Once you've made the petal, you can shape it, and then repeat this process for the other three corners.
There is one more layer of flaps on the underside of your flower. Fold them out to form the leaves.
And there you have it! You've just made a beautiful origami flower.
